The "difference date" is the date where the clock calculates the number of days to.
 First I want to change this date via menue "diff", but the current HEX size is at 99,6%.

So there was no size for the code to do this.

The current "diff date" is 10.12.2020.

So if it is the 10.12.2017 the clock shows something like 1096 days.

If you want to change this date, please open the "clock.epp" file and change the following:

```
clock.eep ☒
1    :100000002A140C0A06000600010100000062657255
2    :100010006E6468616666572407765622E64656372BE
3    :10002000697374696E6E40636F706365612E726F8E
4    :00000001FF
5
```

2A = 42   CRC -> 10+12+20=42

14 = 20   year

0C = 12   month

0A   day

So, if you want to change to "01.01.2000" it's:

CRC=02   (01+01+00)

Year=00

Month=01

Day=01

Replace "2A140C0A" with "02000101"

That's it.
